

Introduction to Environmental Genomics for (Eco)Toxicology

Queen's University Biological Station, June 2018

Course website:

<http://colauttilab.github.io/SETAC.html>

BUT first, more libraries...

See list on course website:

<http://colauttilab.github.io/SETAC.html>

@ColauttiLab

Rapid Evolution in novel environments

Research Background

University of Windsor & GLIER – Bsc (Hs), MSc

Hugh MacIsaac

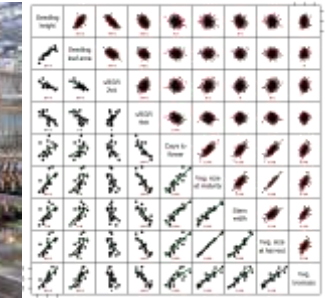

Dan Heath

University Toronto – PhD

Spencer Barrett

Research Background

Duke University – Postdoc

Tom Mitchell-Olds

Jill Anderson

University of British Columbia – Postdoc

Loren Rieseberg

University of Tuebingen – Postdoc

Oliver Bossdorf

Durham, NC

Vancouver, BC

Tuebingen, DE

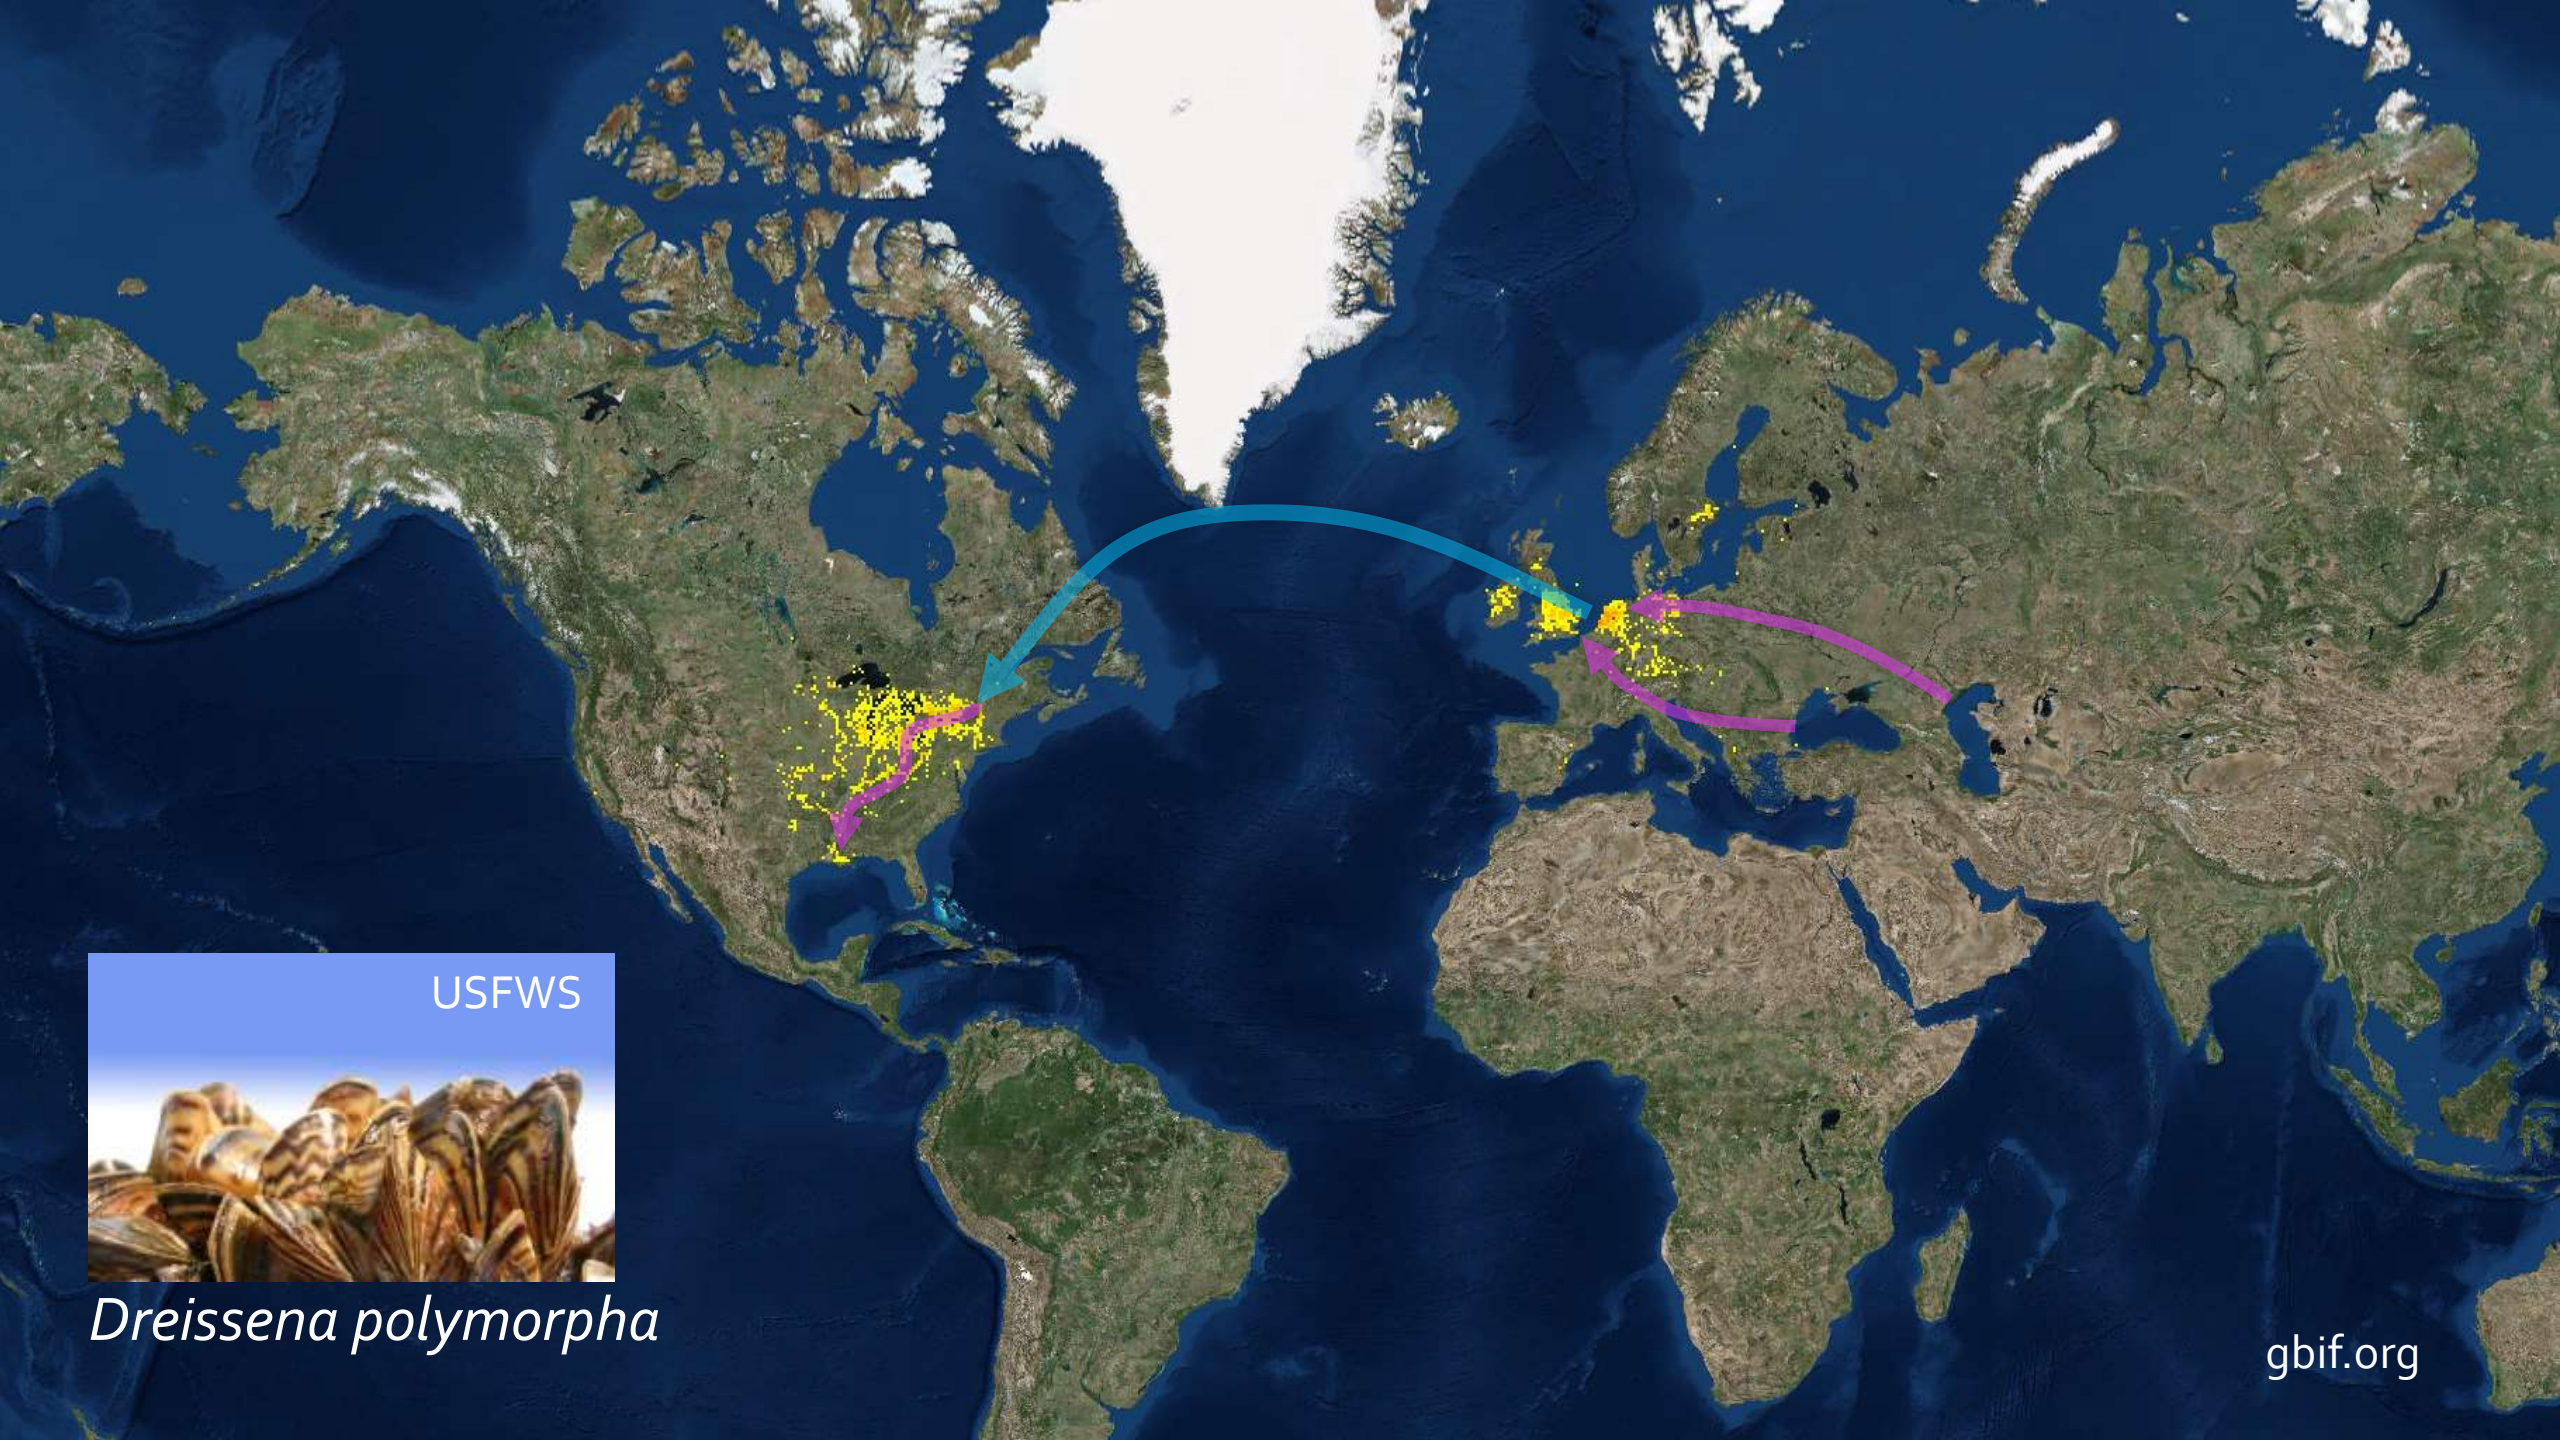

Ecology & Evolution in the Anthropocene

Environment --> Natural Selection --> Genome Evolution

Grand, unplanned experiments in ecology/evolution

USFWS

Dreissena polymorpha

“Invasion genetics of the spiny waterflea”
– Colautti et al. 2005

“Invasion genetics is a relatively new discipline that investigates patterns of genetic variation in populations of invasive species and their ecological and evolutionary consequences.”
– SCH Barrett 2016

“**Invasion genetics** is a relatively new discipline that investigates patterns of genetic variation in populations of invasive species and their ecological and evolutionary consequences.”

– SCH Barrett 2016

Ecological & environmental genomics investigate patterns of genome-wide variation in natural populations or species communities, to address ecological and environmental questions.

Evolution of phenology in response to climate

Timmins, ON

Time

Blandy, VA

Time

Rapid evolution of herbivore resistance?

A map of the Eastern United States and parts of Canada, featuring several colored location pins (red and blue) indicating specific study sites. Overlaid on the map are three portrait photographs of researchers: Muzz Abdur-Razak (top left), Sierra Klueppel (top right), and Eugene Sit (bottom right). The map labels include Chicago, Detroit, Toronto, Indianapolis, Nashville, New York, Philadelphia, and Boston.

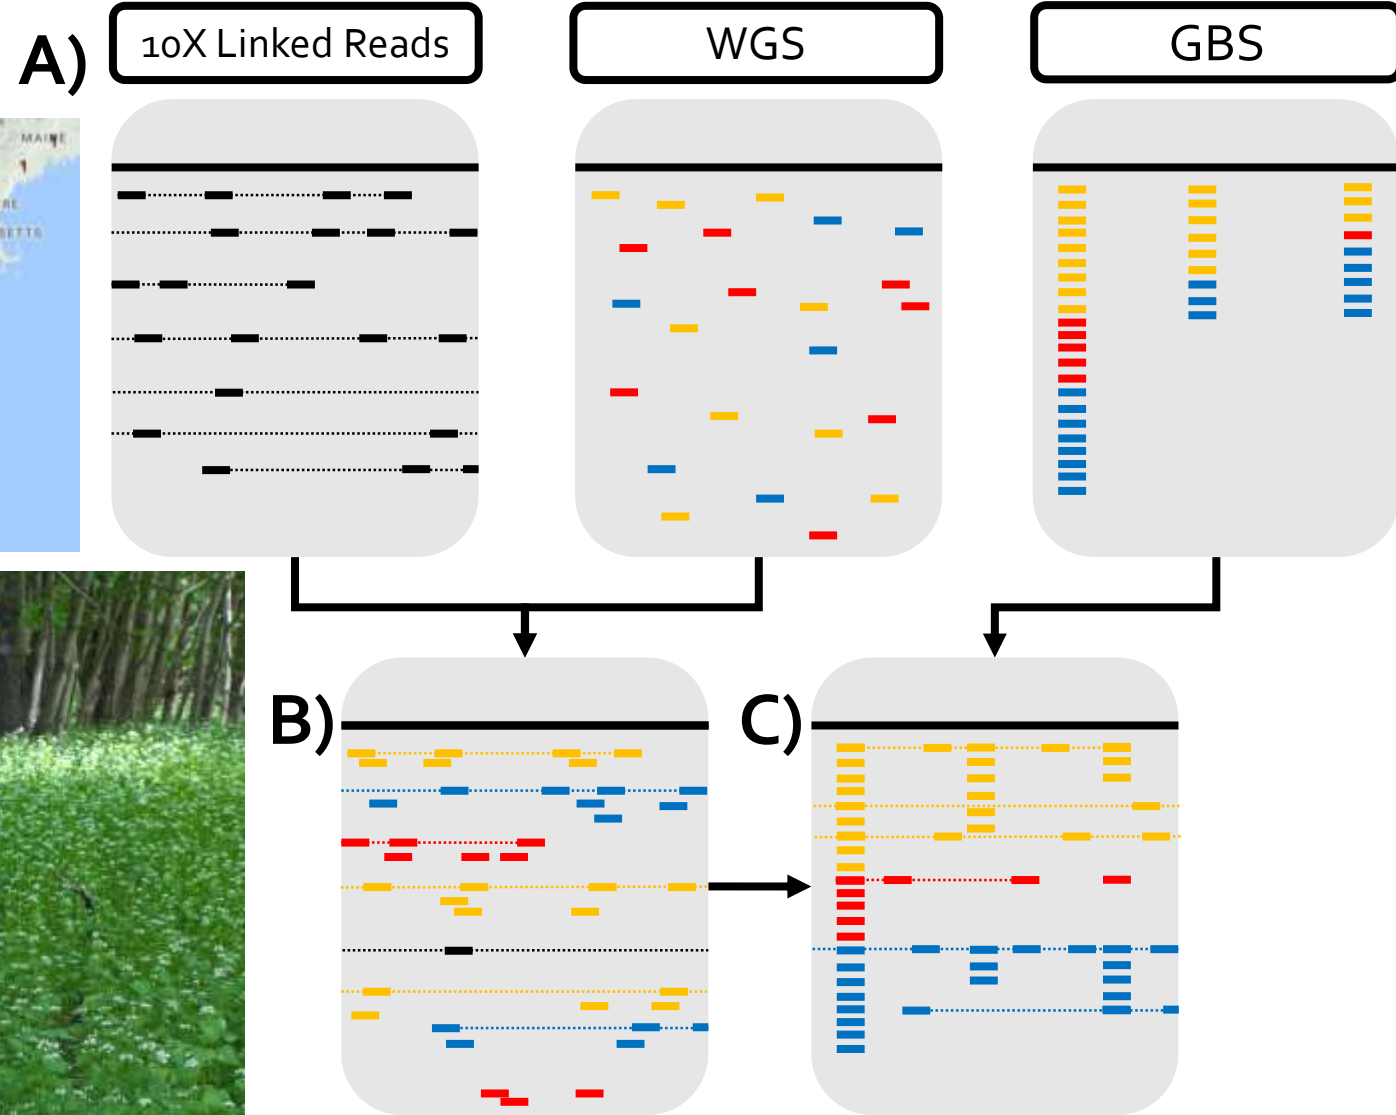

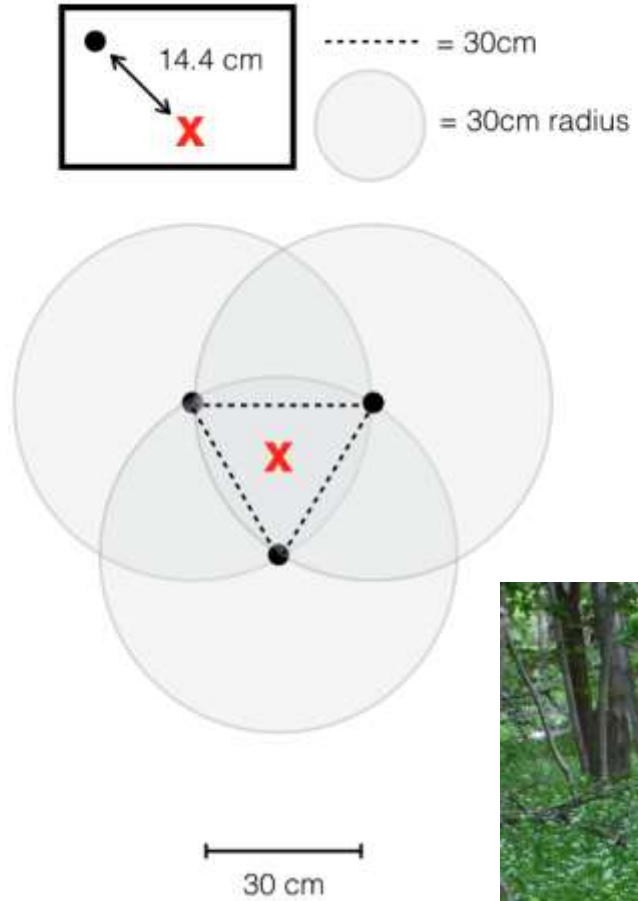

Eugene Sit

Alliaria petiolata ecology: plant-microbe interactions

Population genomics of garlic mustard (*Alliaria petiolata*)

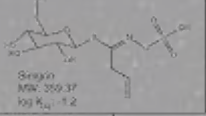

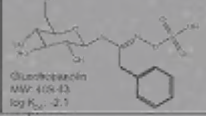

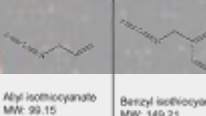

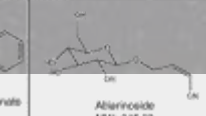

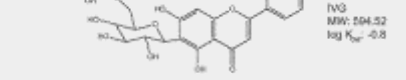

Alliaria petiolata ecology: plant-microbe interactions

Beneficial fungus
(Mycorrhizae)

Root

 Sinigrin MW: 359.37 log K_{ow} : -1.2	 Glutrothapacilin MW: 404.43 log K_{ow} : -2.1	
 Allyl isothiocyanate MW: 99.15 log K_{ow} : 1.9	 Benzyl isothiocyanate MW: 149.23 log K_{ow} : 3.2	 Abarinocside MW: 245.23 log K_{ow} : -1.6
 IVG MW: 504.52 log K_{ow} : -0.8		

Glucosinolates

Deer ticks (*Ixodes scapularis*)

Metagenomics of ticks & their microbiomes

Introduction to sequencing technology

Introduction to R for genomics, meta-genomics & transcriptomics

Working with high-throughput sequencing data: analyze & visualize

1. Learn by doing

Hands-on tutorials

(Short) field excursion

2. Emphasis on transferrable skills

Coding

Data Science! (collect → manage → visualize → analyze → report)

Communication & Teamwork

3. Cumulative learning – each activity builds on previous one

Our approach – 3 pillars

1.

2.

3.

Name

University and education background

Current Research (or Research Interests)

Future Goals (short-term and long-term)

1. Team Assignments (1 vehicle per team?)
2. Make up a short, catchy name for your team
3. Which team member speaks the most languages?

Team 1 – Clare, Kate, Andrea, Richard, Jennifer

Team 2 – Travers, Heather, Christine, Katie, Ling

Team 3 – Tyler, Nathanael, Ève, Erin, Kurtis

Team 4 – Nicole, Tyler, Kathleen, Tariq, Ellyn
